MANUFACTURERS & EXPORTERS OF WATER TREATMENT
CHEMICALS

Water Treatment Solutions

Your Partner in Water Treatment

Delivering consistent, high-quality service to our clients is our top priority.

About Us

Kranti Water is a reliable partner for industries, municipalities, and distributors seeking effective wastewater treatment solutions. We provide a wide range of treatment chemicals that deliver optimum results while supporting safe and sustainable practices.

Headquartered in Gujarat, India, we cater to both domestic and international markets with a strong commitment to quality, timely delivery, and customer satisfaction.

With our expertise and dependable supply chain, we ensure our customers receive the right chemicals at the right time, every time.

Our Differentiators

WHY KRANTI WATER

Deep Technical Expertise

Technical assistance and troubleshooting

Pan-India Reach

Custom Formulations

Product guidance and application support

Responsive Support

"Technical depth, custom formulations, and responsive support — built for India's industrial demands."

Our Water Treatment Services

Comprehensive chemical solutions engineered for industrial performance and reliability.

TREATMENT PROGRAMS

Boiler Water Treatment

Scale inhibitors, oxygen scavengers, and pH controllers for maximum boiler efficiency.

Cooling Tower Water Treatment

Corrosion inhibitors, biocides, and scale-control chemicals to protect cooling systems.

RO & Membrane Chemicals

Antiscalants, cleaners, and biocides formulated to extend membrane life and flux.

SPECIALIZED TREATMENT

ETP/STP Treatment

Specialized chemicals and solutions for efficient operation of effluent and sewage treatment plants.

Brine Water Treatment

Tailored chemical programs to control scaling, corrosion, and microbial growth in brine systems.

Membrane Cleaning Services

Cleaning protocols that restore system efficiency between scheduled cleanings.

TECHNICAL & FIELD SUPPORT

Custom Chemical Formulations

Product guidance and application support tailored to your water source and system.

On-Site Field Service

Specialists diagnose issues, optimize treatment programs, and reduce downtime.

Dosing System Supply

Pumps, tanks, and control equipment supplied and supported end to end.

Monitoring System

Real-time monitoring solutions for critical water quality parameters.

One partner for every stage of your water treatment program — from boilers and cooling towers to membranes, effluent, and field support.

KRANTI WATER — OUR SERVICES

Kranti provide complete solutions for boiler and cooling water systems – combining essential chemicals and services to ensure efficiency, protection, and reliability.

Boiler Water Treatment

For a steam-generating system to work at its best, it must transfer heat efficiently and produce steam effectively. Deposits and corrosion act like barriers, reducing efficiency and increasing operating costs.

Kranti Water offers specialized water treatment chemicals that safeguard steam-generating systems against scale, deposits, and corrosion. Our carefully formulated chemicals are designed to:

- Prevent scale formation for better heat transfer and fuel efficiency
- Improve reliability of boilers and steam equipment
- Protect metal surfaces against corrosion and costly damage
- Extend equipment life and reduce maintenance needs

Product Name	Application & Usage
KCWATER-06	Acidic, liquid form – removes scale deposits effectively
KCWATER-3001	Removes sludge & impurities from boiler water
KCWATER-3004	Increases boiler water pH, prevents acidic corrosion
KCWATER-3226	For low-pressure boilers – controls scaling & corrosion
KCWATER-3223	For medium-pressure boilers – advanced protection
KCWATER-3100	Sulphite-based, eliminates dissolved oxygen
KCWATER-3200	Hydrazine-based, for high-pressure boilers, eliminates dissolved oxygen

Our field team helps select the right dosing regime for your boiler pressure class and water chemistry, so protection starts from day one.

Every product ships with dosing guidance and technical support, so your boiler operators get results from the first fill.

Cooling Tower Water Treatment

The cooling efficiency of any system depends greatly on the insulating effects of heat transfer surfaces such as deposits, scaling, tubing, or biofilm, as well as on how effectively cooling towers maintain water temperatures.

Keep your cooling systems running efficiently, reliably, and cost-effectively with Kranti's proven solutions.

- 01 Advanced Chemical Formulations** – Prevent scale, corrosion, and biofilm buildup for maximum heat transfer efficiency.
- 02 Expert Field Service** – Our specialists provide on-site support to optimize treatment and reduce downtime.
- 03 Customized Solutions** – Whether your system requires near-neutral pH or slightly alkaline programs, we design the right treatment plan based on your water source and operational needs.

With Kranti Chemicals, you don't just get chemicals — you get a complete water treatment partnership that lowers operating costs, extends equipment life, and boosts performance.

Product Name	Application & Usage
KCWATER-606	Removes algae from cooling tower water (weekly use)
KCWATER-608	Stops bacterial growth in cooling tower water (weekly use)
KCWATER-2002	Bio-dispersant for cooling towers
KCWATER-7700	Removes scale & corrosion from cooling towers and circulation lines (Zinc Phosphate Base)
KCWATER-2521	Removes scale & corrosion from cooling towers and circulation lines (Polymer Base)

On-Site Support

Field specialists monitor cycles of concentration and adjust dosing to keep towers scale-free.

Compatible Systems

Works across open recirculating, closed loop, and once-through cooling water systems.

Reverse Osmosis Chemicals

Kranti Water has developed a comprehensive range of cleaning products and services designed to optimize plant operations and extend membrane life.

Kranti offers a complete range of RO chemicals – anti scalants, cleaners, bio-dispersants, and biocides – to protect membranes and ensure reliable, long-lasting performance.

Our solutions effectively combat scaling, fouling, and biological growth, helping you achieve optimized operation with reduced downtime.

Membrane Cleaning

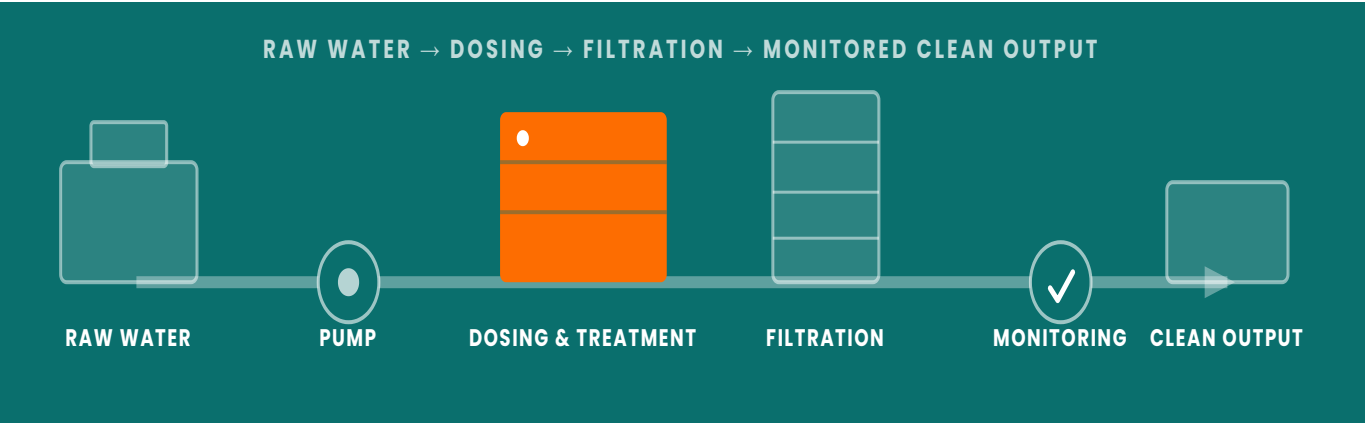

Membrane systems are used in a wide range of industries, each with unique cleaning challenges. Kranti Water's advanced membrane cleaning solutions help restore system efficiency and extend the time between cleanings.

Our product portfolio includes specialized formulations developed for the most demanding applications such as desalination, food & beverage, pharmaceuticals, and MBR systems.

For any type of membrane and any application – if there's a cleaning challenge, Kranti Water has the right solution.

Product Name	Application & Usage
KCWATER-9201	Inorganic Cleaner (Alkaline). Used to clean RO membranes
KCWATER-9202	Inorganic Cleaner (Acidic). Removes mineral scales like calcium carbonate, iron, and other inorganic deposits from RO membranes
KCWATER-9206	Organic Cleaner for RO Membranes
KCWATER-9001	Antiscalant (Low pH). Prevent scale formation in RO system
KCWATER-9004	Antiscalant / Antifoulant (HEDP Base). Prevents scaling and fouling in RO membranes
KCWATER-9123	Antiscalant / Antifoulant (Polymer Base). Controls scale and fouling more effectively in tough waters with high silica, iron, or sulphate
KCWATER-9115	Antiscalant for Ca, Mg & Metal Impurities
KCWATER-9651	Biocide for RO Membranes

Our Treatment Process

1

Water Analysis

Assess source water and system conditions

2

Custom Formulation

Match chemistry to your operating needs

3

Dosing & Treatment

Apply the treatment program on-site

Product Range at a Glance

Three treatment lines, engineered to solve the most common problems in industrial water systems.

Boiler Water Treatment Scale Control Corrosion Protection Oxygen Scavenging	Cooling Tower Treatment Scale Control Corrosion Inhibition Biofilm Control	Reverse Osmosis Chemicals Antiscalants Membrane Cleaners Biocides
